

# NATIONAL ENROLLMENT/ ELIGIBILITY CLEARING HOUSE

Creation of the universal patient assistance program (PAP) application form would be the first step in creating a universal process for enrollment on the front end and help with auditing needs on the backend.

To enhance this process and provide a more centralized PAP program, a national clearing house could be established. A more centralized process may also provide a focal point where other needs of the underserved could be considered such as their eligibility for existing social programs.
